

Luminous skin makeup: foundation, concealer, and lips

Preparation, foundation, concealer, and lips: the order and quantities for a luminous finish that lasts all day.

Prep the skin

A well-absorbed moisturizer prevents foundation from clinging. Wait a minute before applying makeup and set only the shiny areas.

Foundation and concealer

Apply a small amount to the center of the face and blend outwards. Concealer goes on after foundation: that way you need much less product.

Lips and makeup removal

Tints last longer on exfoliated and hydrated lips. At the end of the day, remove everything with an oil-based cleanser before your water-based cleanse.
